

KRISHNA PANGARKAR

Software Developer

· Nashik, Maharashtra, India · pangarkarkrishna61@gmail.com · +91-7083793597
· GitHub · LeetCode · LinkedIn

Professional Summary

Software Developer with hands-on experience across the MERN stack and Generative AI, specializing in building scalable full-stack applications, integrating LLMs via Retrieval-Augmented Generation (RAG), and delivering secure, production-ready backend services. Proven track record leading AI-driven projects from concept to deployment, including a patented public-safety system, with a strong focus on clean architecture, performance, and user experience.

Technical Skills

Languages: C++, JavaScript (ES6+), Python, PHP

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend & Databases: Node.js, Express.js, MongoDB, MySQL

AI / Generative AI: Retrieval-Augmented Generation (RAG), LLM Integration, AI Agents, Prompt Engineering, Vector Databases, LangChain

AI-Assisted Development Tools: Claude, OpenAI Codex, Google Antigravity, Cursor

Tools & Practices: Git & GitHub, RESTful APIs, MVC Architecture, Agile/Scrum

Work Experience

Software Developer — BigHost India Pvt. Ltd. (Cloud Hosting, Web Design & Software Development)

Oct 2025 – Present

- Built and shipped multiple production full-stack modules on the MERN stack, including reusable React component libraries and responsive UIs, cutting repeat frontend development effort across projects by standardizing shared components.
- Integrated Generative AI features into client applications using Retrieval-Augmented Generation (RAG) and LLM APIs, adding AI-assisted search and content workflows to existing product lines without disrupting core functionality.
- Designed secure RESTful APIs following MVC architecture across several client projects, optimizing slow database queries and reducing redundant API calls to improve page load and response times.
- Delivered end-to-end business systems from scratch, including a CRM, a quotation-and-checkout workflow, an admin dashboard, and an e-commerce platform, each taken from requirements gathering through deployment.
- Implemented role-based access control (RBAC) and authentication/authorization across all client applications, and built computer-vision-based and real-time analytics dashboards to give non-technical stakeholders live visibility into system activity.
- Worked within an Agile team following sprint-based development, code reviews, and Git-based version control, consistently delivering client-ready features on schedule.

Full Stack Web Development Intern — NetLeap IT Training and Solutions, Nashik

Jan 2025 – Feb 2025

- Completed a full-stack web development internship, gaining hands-on experience with the MERN stack (MongoDB, Express.js, React.js, Node.js), RESTful APIs, JWT, and OAuth.
- Contributed to the development of a Content Management System (CMS) project as part of a collaborative team.
- Gained practical experience with version control using Git and GitHub in a collaborative development workflow.

Projects

AI-Powered Volunteer Management System — Kumbh Mela (Patented)

Team Lead — Artificial Intelligence, Computer Vision & Public Safety Systems

[Live Demo](#) | [GitHub](#)

- Led a team to build an AI-driven MERN stack application for one of India's largest public gatherings, using MVC architecture to structure computer vision pipelines for crowd detection, people counting, overcrowding prediction, and hazard identification from live CCTV feeds.
- Designed and trained multiple AI/ML models to analyze crowd behavior patterns and forecast high-risk situations, triggering automated real-time alerts to authorities and on-ground volunteers ahead of potential incidents.
- Built secure, scalable backend services with optimized RESTful APIs, RBAC, and real-time dashboards covering volunteer management, crowd analytics, alerting, and live camera monitoring, engineered to hold up under the high concurrent load of a mass public event.
- Filed and secured a government-approved design patent for the system's architecture, validating its technical originality for large-scale public safety deployment.

DoctorApp — Generative AI-Powered Ayurvedic Healthcare Assistant

Team Lead — Artificial Intelligence & Healthcare Systems

[Live Demo](#)

- Developed an AI-powered healthcare assistant using React.js, Node.js, Express.js, MongoDB, and the Gemini API, implementing RAG, LLM integration, and prompt engineering to provide accurate, context-aware clinical information for Ayurvedic doctors.
- Engineered an intelligent medical knowledge retrieval pipeline covering document ingestion, text extraction and chunking, embedding generation, semantic search, and contextual response generation, improving the accuracy of AI-assisted clinical consultations.
- Designed secure, scalable RESTful APIs following MVC architecture for AI chat, document processing, conversation management, and healthcare knowledge retrieval, delivering a responsive and extensible platform for clinical decision support.

Travsolo — Solo-Travel Blogging Platform

MERN Stack Web Application

[Live Demo](#) | [GitHub](#)

- Built a full-stack travel blogging platform (MongoDB, Express.js, React.js, Node.js) with a blog-creation feature enabling users to share travel experiences with images, locations, attractions, and pricing.
- Implemented a hotel search feature with real-time suggestions, allowing users to search accommodations by city, rating, or name.
- Used Mongoose for efficient database interactions and optimized API endpoints for performance, delivering a responsive and user-friendly UI.

Education

Guru Gobind Singh College of Engineering, Savitribai Phule Pune University

B.E. in Computer Engineering · CGPA: 7.93 / 10 · Nov 2022 – July 2026

Certifications

- Government-Approved Project Design Patent — AI-Powered Volunteer Management System
- Full Stack Web Development — Internship Certificate, NetLeap IT Training and Solutions
- Google Data Analytics Certificate — Coursera
